DRAWING INDEX	
Sheet	Subject
001	Index, scope, revision and legend
002	System roles and simulated material flow
003	Current communication network and endpoints
004	Logical I/O allocation and write ownership
005	Virtual safety and startup conditions
006	LS sequence and result routing
007	Single/continuous, STOP and recovery
008	LS / virtual ATE register transaction
009	LabVIEW inspection and acceptance CSV
010	ESP32 measured sensor wiring and frame
011	FX prepare / preview / commit / ACK
012	FX environmental judgment and confirmed settings
013	FX to LS packed environment telegram
014	LS alarms, timers and output interlocks
015	SIM_IO plant response and fault injection
016	CIMON pages, commands and display policy
017	Verification scope and evidence register
018	Planned AC / DC power distribution
019	Planned hardware safety architecture
020	Planned physical DI / relay DO mapping
021	Planned panel zones and terminal groups
022	Planned field interfaces and cable schedule

IMPLEMENTED SCOPE

Real ESP32-S3 / SEN0137 temperature and humidity.
LS and FX program execution in simulators.
CIMON + MX OPC + LabVIEW VirtualATE.
Transport, clamp, gates and safety inputs are simulated.

DOCUMENT BASIS

001-017: functions recorded against BL-001.
018-022: physical expansion concept only.
No construction release or compliance certification.
NTS: do not derive physical dimensions from these sheets.

REFERENCE CONVENTION

Same device/address has one owner across sheets.
M/D/T denote LS program devices; FX D/M are qualified FX.
Modbus offset0 is distinct from 40001 notation.
Arrow direction denotes initiator or data flow as labelled.

REVISION R0

Initial portfolio issue; baseline BL-001.
Test scope and evidence: see drawing 017.
